In order to provide the maximum flexibility, know-how and cost-efficiency for our customers, we made sure that the entire value chain is in our hands.

From the polymerisation of the high-tech FiPur® polyurethane to the tools, made in our own tool shop, up to the prototype and series manufacturing. The finishing of the extremely sharp sealing lips for dynamic sealings as well as the 100% visual checks with highly efficient automated testing machines close the loop.

All processes are controlled by us so that we remain highly flexible and reduce lead times in a way to meet customer demands.

Thanks to our high degree of vertical integration, we are virtually independent of external suppliers or trade restrictions.
